### Limit of a Function

#### Intuitive Definition

Suppose f is defined when x is near the number a. (This means that f is defined on some open interval that contains a, except possibly at a itself.)

Then write,

Dr. G.H.J. Lanel (USJP)

(I) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1))

### Limit of a Function

### Intuitive Definition

Suppose *f* is defined when *x* is near the number *a*. (This means that *f* is defined on some open interval that contains *a*, except possibly at *a* itself.)

Then write,

Dr. G.H.J. Lanel (USJP)

### Limit of a Function

### Intuitive Definition

Suppose *f* is defined when *x* is near the number *a*. (This means that *f* is defined on some open interval that contains *a*, except possibly at *a* itself.)

Then write,

$$\lim_{x\to a} f(x) = L$$

Dr. G.H.J. Lanel (USJP)

#### And say

### "the limit of f, as x approaches a, equals L?

If we can make the values of f arbitrarily close to L (as close to L as we like) by restricting x to be sufficiently close to a (on either side of a) but not equal to a.

And say

### "the limit of *f*, as *x* approaches *a*, equals *L*?

If we can make the values of f arbitrarily close to L (as close to L as we like) by restricting x to be sufficiently close to a (on either side of a) but not equal to a.

### **Exercise 1**

### What is the limit as x approaches a in each graph?

• • • • • • • • • • • • •

### Exercise 2

Find the limit numerically:

$$\lim_{x\to 1}\frac{x-1}{x^2-1}$$

x < 1	f(x)	x > 1	f(x)
0.5	0.666667	1.5	0.400000
0.9	0.526316	1.1	0.476190
0.99	0.502513	 1.01	0.497512
0.999	0.500250	 1.001	0.499750
0.9999	0.500025	 1.0001	0.499975

イロト イヨト イヨト イヨト

### **Exercise 3**

Find the limit numerically :

8/47

#### Intuitive Definition

 $\lim_{x \to a^-} f(x) = L$ 

and say the left-hand limit of f as x approaches a [or the limit of f as x approaches a from the left] is equal to L if we can make the values of f arbitrarily close to L by taking x to be sufficiently close to a with x less than a.

Intuitive Definition

 $\lim_{x\to a^-} f(x) = L$ 

and say the left-hand limit of f as x approaches a [or the limit of f as x approaches a from the left] is equal to L if we can make the values of f arbitrarily close to L by taking x to be sufficiently close to a with x less than a.

#### Intuitive Definition

 $\lim_{x \to a^+} f(x) = L$ 

and say the right-hand limit of f as x approaches a [or the limit of f as x approaches a from the right] is equal to L if we can make the values of f arbitrarily close to L by taking x to be sufficiently close to a with x greater than a.

Intuitive Definition

 $\lim_{x\to a^+} f(x) = L$ 

and say the right-hand limit of f as x approaches a [or the limit of f as x approaches a from the right] is equal to L if we can make the values of f arbitrarily close to L by taking x to be sufficiently close to a with x greater than a.

### Theorem

$$\lim_{x \to a} f(x) = L$$
iff
$$\lim_{x \to a^+} f(x) = L \text{ and } \lim_{x \to a^-} f(x) = L$$

# Infinite Limits

#### Intuitive Definition

Let *f* be a function defined on both sides of *a*, except possibly at *a* itself. Then,

 $\lim_{x\to a} f(x) = \infty$ 

means that the values of f can be made arbitrarily large (as large as we please) by taking x sufficiently close to a, but not equal to a.

### Infinite Limits

#### Intuitive Definition

Let *f* be a function defined on both sides of *a*, except possibly at *a* itself. Then,

means that the values of f can be made arbitrarily large (as large as we please) by taking x sufficiently close to a, but not equal to a.

# Infinite Limits

#### Intuitive Definition

Let *f* be a function defined on both sides of *a*, except possibly at *a* itself. Then,

$$\lim_{x\to a}f(x)=\infty$$

means that the values of f can be made arbitrarily large (as large as we please) by taking x sufficiently close to a, but not equal to a.

### Intuitive Definition

$$\lim_{x\to a}f(x)=-\infty$$

Means that the values of f can be made arbitrarily large negatively by taking x sufficiently close to a, but not equal to a.

### Exercise 10

Find

Dr. G.H.J. Lanel (USJP)

Functions, limits and continuity

Lecture 3 25 / 47

### Outline

イロト イヨト イヨト イヨト

#### Definition

#### A function f is continuous at a number a if

 $\lim_{x\to a}f(x)=f(a)$ 

*f* is discontinuous at *a* (or *f* has a discontinuity at a) if f is not continuous at a.

A discontinuity may be a removable discontinuity, jump discontinuity or an infinite discontinuity.

Dr. G.H.J. Lanel (USJP)

Lecture 3 27 / 47

#### Definition

A function f is continuous at a number a if

$$\lim_{x\to a}f(x)=f(a)$$

f is discontinuous at a (or f has a discontinuity at a) if f is not continuous at a.

A discontinuity may be a removable discontinuity, jump discontinuity or an infinite discontinuity.

#### Definition

A function f is continuous at a number a if

$$\lim_{x\to a}f(x)=f(a)$$

f is discontinuous at a (or f has a discontinuity at a) if f is not continuous at a.

A discontinuity may be a removable discontinuity, jump discontinuity or an infinite discontinuity.

### Intermediate Value Theorem

#### Definition

Suppose that *f* is continuous on the closed interval [*a*; *b*] and let *N* be any number between f(a) sad and f(b), where  $f(a) \neq f(b)$ .

Then there exists a number  $c \in (a, b)$  such that f(c) = N.

### **Derivatives**

#### Definition

The derivative of a function f at a number a, denoted by f'(a), is

$$f'(a) = \lim_{x \to a} \frac{f(x) - f(a)}{x - a} = \lim_{h \to 0} \frac{f(a + h) - f(h)}{h}$$

provided that this limit exists.

The tangent line to the curve y = f(x) at the point P(a, f(a)) is the line through P with slope m = f'(a).

Dr. G.H.J. Lanel (USJP)

### **Derivatives**

### Theorem

#### Theorem

If *f* is differentiable at *a*, then *f* is continuous at *a*.

- A function may fail to be differentiable due to a discontinuity, a corner, or a vertical tangent.
- If *f* is a differentiable function, then its derivative *f'* is also a function.

f' may have a derivative of its own, denoted by (f')' = f''.

This new function *f*" is called the *second derivative* of *f* because it is the derivative of the derivative of *f*.

## • Notations for higher order derivatives; f''(x), $\frac{d^2y}{dx^2}$ , ..., $f^n(x)$ , $\frac{d^ny}{dx^n}$

 If s = s(t) is the position function of an object that moves in a straight line, its first derivative represents the (instantaneous) velocity v(t) of the object as a function of time.

The instantaneous rate of change of velocity with respect to time is called the acceleration a(t) of the object.

Thus the acceleration function is the derivative of the velocity function and is therefore the second derivative of the position function.

- Notations for higher order derivatives; f''(x),  $\frac{d^2y}{dx^2}$ , ...,  $f^n(x)$ ,  $\frac{d^ny}{dx^n}$
